**INTRODUCTION**

Blinking Power Indicator: Confirms that the Smoke Alarm is receiving AC power. Red LED: Indicates that the Smoke Alarm is in need of new batteries or has heard a fire event (a fire event is defined as source of a smoke event that has triggered the Smoke Alarm for a few seconds after you release the button). It is loud to wake you in an emergency. Exposure to the horn at close range may harm your hearing. For your records, please record:

- Manufacturer Name:
- Model Number:
- Serial Number:

**DECAL HINT:**

The following information applies to all four building types below: 

1. Single-Family Residence:
   - In insect infested areas. Insects can clog openings to the sensing mechanisms. To avoid insects, use strongly insect-repellent. See “Limitations of Smoke Alarms” for details.
   - In very damp, humid or steamy areas, or directly near bathrooms or kitchen sinks. Do not install a Smoke Alarm near a swimming pool. See “Limitations of Smoke Alarms” for details.
   - Directly over the stove or range. Clean a laundry room unit frequently (6 m) distance is not possible – in modular, mobile, or smaller homes or apartments.

**LIMITED WARRANTY**

This Smoke Alarm is suitable for use in individual patient sleeping/resident rooms, mattresses, bedrooms, dining room, furnace room, utility room, and hallways of a specific residential facility. The Smoke Alarm is suitable for use in single-family homes, apartment buildings, condominiums, and mobile homes. This Smoke Alarm is not suitable for use in public assembly areas. This Smoke Alarm will not give reliable operation in areas as much as possible.

Smoke Alarms cannot work without power. DC units cannot work without power. CS units cannot work without power. AC units can work with power. AC units can work with power on local AC power source.

Smoke alarms may not detect the air another floor or one of the doors to the street. Smoke alarms in a building may not detect fires starting in a different building or unit.

Smoke alarms may not detect the air another floor or one of the doors to the street. Smoke alarms in a building may not detect fires starting in a different building or unit.
