

8600 EMT Conduit Cutter

Conduit Cutting Made Easy - No Deburring Needed

The new Greenlee 8600 Conduit Cutter eliminates the need to deburr the inside of conduit after it is cut. Although the 8600 may look like other tubing cutters, it has a unique patented cutting wheel with a shoulder that prevents it from cutting completely through the conduit wall.

You begin using the 8600 just like other tubing cutters by alternately tightening the cutter wheel and turning the cutter around the conduit, but when the cut is deep enough to reach the shoulder on the cutter wheel,

you remove the cutter and then simply snap the conduit into two pieces. Because the cutter wheel didn't penetrate the conduit wall, no burr is created.

In addition, the 8600 is the best tool available for cutting conduit that already has wire installed because the cutter wheel can never accidentally contact and damage wire insulation.

PRODUCT FEATURES

- **Patented cutting wheel** cuts clean and eliminates the need to debur the inside of the conduit.
- **Simple to use**-just tighten the screw, turn the tool around the conduit, and snap the conduit in two!
- **Can cut conduit with wire inside** without damaging the wire.
- **Heavy duty cast body** for long life.
- **Large smooth spindle knob** is easy to grip and doesn't hurt your hand.
- **Replaceable cutter wheel.**

SPECIFICATIONS

| | |
|-----------------------------|--|
| Length fully open: | 8 1/4" (210 mm) |
| Length fully closed: | 7" (178 mm) |
| Weight: | 1.2 lb. (.55 kg) |
| Cutting Capacity | Cuts 1/2" and 3/4" diameter EMT electrical conduit |
